CAINFORMAL INFORMALION PERTAINING TO WATER RIGHTS IN CALIFORNIA There are two principal types of surface water rights in California. They are ripanan and appropriative rights. A nearism right enables an owner of land bordering a natural lake or stream to take and use water on his riparian right to the severed parcel. Generally, a ripanan water user must share the water supply with other riparian users. Ripanan rights may be used to divert the natural flow of a stream but may not be used to store water for later use or divert which originates in a different watershed or return flows from use of groundwater. An appropriative right is required for use of water on noningarian land and for storage of water. Generally, appropriative right is required for use of water on noningarian land and for storage of water. Generally, appropriative right is required for use of water on noningarian land and for storage of water. Generally, appropriative right is required for use of water on noningarian land and for storage of water. Generally, appropriative right is required for use of water on noningarian land and for storage of water. Generally, appropriative right is required for use of water on noningarian land and for storage of water. Generally, appropriative tight is required for use of water on noningarian land and for storage of water. Generally, appropriative tight is required for use of water on noningarian land and for storage of water. Generally, appropriative states on the state to notify such users if someone proposes a new appropriation upstream from their diversions, and (3) glassits the State to determine if additional water is available for future appropriations.	19		(af/mg) 19		_ (af/mg) 19		(af/mg)

An appropriative right is required for use of water on nonriparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State. Statements of Water Diversion and Use must be filed by riparian and per 1914 appropriative water users. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversions, and (3) assists the State to determine if additional water is available for future appropriators. The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or			•	<u></u>				,
There are two principal types of surface water rights in California. They are riparian and appropriative rights. A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or divert water which originates in a different watershed, or return flows from use of groundwater. An appropriative right is required for use of water on nonriparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State. Statements of Water Diversion and Use must be filed by riparian and per 1914 appropriative water users.
